This protein comprises LA11.1 esterase es2. Newly identified polynucleotides (AAT79321-40) encoding esterases (AAW23069-88), som which are claimed, can be used for recombinant production of the en in host cells. The esterases are stable at high temperature and in organic solvents, making them superior for use in production of pur chiral compounds used in pharmaceutical, agricultural and other che industries. A method is claimed for transferring an amino group from amino acid to an alpha-keto acid using a claimed esterase. The enzy may also be useful as ripening starters in cheese making, in lignin	encoding heat stable esterase from thermophilic bacteria five in organic solvents, useful in cheese or paper and to study plant resistance to disease.                                      Amino acid sequence encoding a Pseudomonas lipase. Used as a lipid-hydrolysing enzyme for oils and fats processing, in medicine, diagnosis, in detergents and digestants. It can catalyse ester hydrolysis, ester synthesis or ester conversion, in the prodn. of chemical prods. esp. optically active cpds. The DNA can be obtd. from P. fragi and cloned and expressed in E. coli. (Updated on 25-MAR-2003 to correct PR field.)

                                                                                   This sequence represents the P. fragi lipase protein. This lipase has high thermostability and is active at acid pH. A varient of the mature lipase A in which phe29 has been replaced by a Trp residue has increased specific activity compared to the parent lipase. The lipase or varient may be used in ester hydrolysis, ester synthesis or interesterification. They can also be used for avoiding pitch trouble in the process for the production of mechanical pulp or a paper-making process using mechanical pulp. They can also be used in detergents or as a digestive enzyme, eg. in the treatment of cystic fibrosis. (Updated on 25-MAR-2003 to correct

                                              The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A. baumannii protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                           The invention relates to an isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 sequential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids are single-stranded probe comprising the nucleic acid. The nucleic acids are single-stranded probe comprising the nucleic acid. The nucleic acids is useful for diagnosing pathological conditions. The nucleic acids is useful for diagnosing pathological conditions resulting from E. faecium bacterial infection (e.g. urinary tract infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faecium infections. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid derived from Enterococcus faecium encoding Enterococcus faecium polypeptide useful for detection, prevention and treatment of a pathological condition resulting from a bacterial

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
AAR88009-R88018 are protein variants of Pseudomonas glumae lipase. The sequences are based upon the wild-type P. glumae sequence disclosed in EP407225-A (UNILEVER PLC). The lipase variants may contain one or more of the amino acid substitutions indicated in the features table. Using these variants it was shown that lipases can be modified in a such a way that interaction with the substrate can be improved without forming large

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR88009-R88018 are protein variants of Pseudomonas glumae lipase. The sequences are based upon the wild-type P. glumae sequence disclosed in EP407225-A (UNILEVER PLC). The lipase variants may contain one or more of the amino acid substitutions indicated in the features table. Using these variants it was shown that lipases can be modified in a such a way that interaction with the substrate can be improved without forming large hydrophobic areas on the modified lipase surface which allow aggregation of lipase molecules. the lipase variants show improved in-the-wash lipase molecules. The lipase variants show improved in-the-wash lipalytic activity and may be used in enzymatic detergent compsns. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                     AAR88009-R88018 are protein variants of Pseudomonas glumae lipase. The sequences are based upon the wild-type P. glumae sequence disclosed in EP407225-A (UNILEVER FLC). The lipase variants may contain one or more of the amino acid substitutions indicated in the features table. Using these variants it was shown that lipases can be modified in a such a way that interaction with the substrate can be improved without forming large hydrophobic areas on the modified lipase surface which allow aggregation of lipase molecules. the lipase variants show improved in-the-wash lipolytic activity and may be used in enzymatic detergent compsns.                                                            AAR88009-R88018 are protein variants of Pseudomonas glumae lipase. The sequences are based upon the wild-type P. glumae sequence disclosed in EP407225-A (UNILEVER PLC). The lipase variants may contain one or more of the amino acid substitutions indicated in the features table. Using these variants it was shown that lipases can be modified in a such a way that interaction with the substrate can be improved without forming large hydrophobic areas on the modified lipase surface which allow aggregation of lipase molecules. the lipase variants show improved in-the-wash lipolytic activity and may be used in enzymatic detergent compens. The sequences are based upon the wild-type? I glumae sequence disclosed in EP407225-A (UNILEVER PLC). The lipase variants may contain one or more of the amino acid substitutions indicated in the features table. Using these variants it was shown that lipases can be modified in a such a way that interaction with the substrate can be improved without forming large hydrophobic areas on the modified lipase surface which allow aggregation of lipase molecules. The lipase variants show improved in-the-wash lipolytic activity and may be used in enzymatic detergent compsns. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 319 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pseudomonas lipase variant with increased surface hydrophobicity - improved in-the-wash performance, useful in enzymatic detergent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mutant; lipase; enzymatic detergent; substitution; variant; improved; hydrophobicity.

                                                                                                                                                                                                                                                                                                    AAR88009-R88018 are protein variants of Pseudomonas glumae lipase. The sequences are based upon the wild-type P. glumae sequence disclosed in EP407225-A (UNILEVER PLC). The lipase variants may contain one or more of the amino acid substitutions indicated in the features table. Using these variants it was shown that lipases can be emodified in a such a way that interaction with the substrate can be improved without forming large hydrophobic areas on the modified lipase surface which allow aggregation of lipase molecules, the lipase variants such at lipase surface activity and may be used in enzymatic detergent compsns. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                             Sequence 319 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pseudomonas lipase variant with increased surface hydrophobicity improved in-the-wash performance, useful in enzymatic detergent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Misc-difference
